WLAN Assistant Wizard

How to Install

Before starting the WLAN Assistant Wizard, make sure that your computer connects to your access point/router via wireless network.

Logon your computer as an administrator.

How to Use the Software

1. Make sure the machine is ON.

2. Once the download is complete, double click "ScanNCut-WAW.dmg".

3. Double click "ScanNCut-WAW" in "ScanNCut-WAW" folder.

4. Follow the instructions on the screen.

5. The following screen appears on the machine's LCD and a connection is established.

Connected to WLAN

Specify the "ScanNCut Online" setting in order to send cutting data between ScanNCutCanvas and the machine.

Next

Touch the "Next" key, and then continue with Registering with ScanNCutCanvas for Your Machine. For details, How can I transfer the created/edited data between ScanNCutCanvas and my machine via a wireless network? (ScanNCut Online Setting)

If you have already completed the registration with ScanNCutCanvas for your machine, touch the "OK" key to finish the setup.

Connected to WLAN

OK

If "Connection Fail" appears, the machine failed to establish a connection. Check the location, wireless connection or firewall, and try again.

The error code is indicated after "Connection Fail", check the error code, and click the link below to see the solutions.
